

Mobilizing the immune system to fight inflammatory and viral diseases, as well as cancer

February, 2020

- Breaking News 19/01/2020:
Abivax received FDA clearance to initiate clinical trial with ABX464 in the US

Forward looking statements

This presentation contains information pertaining to Abivax S.A. (“Abivax”). Neither Abivax, nor its management, shareholders, directors, advisors, employees or representatives make any representation or warranty, express or implied, as to the fairness, the accuracy, completeness or correctness of any information contained in this presentation or any other information transmitted or made available to the viewer or recipient hereof, whether communicated in written or oral form. Neither Abivax, nor its management, shareholders, directors, advisors, employees or representatives accept any responsibility in this respect.

This presentation contains forward-looking statements. These statements reflect management’s current views with respect to Abivax’s product candidates’ development, clinical and regulatory timelines and anticipated results, market opportunity, potential financial performance and other statements of future events or conditions, which are naturally subject to risks and contingencies that may lead to actual results materially differing from those explicitly or implicitly included in these statements. Although Abivax believes that the expectations reflected in such forward-looking statements are reasonable, no assurance can be given that such expectations will prove to have been correct. Accordingly, results could differ materially from those set out in the forward-looking statements as a result of various factors, many of which are beyond Abivax’s control. No reliance should be made on such forward-looking statements.

Abivax does not undertake to update or revise the presentation, including the forward-looking statements that may be presented in this document to reflect new information, future events or for any other reason, following distribution, beyond what is required by applicable law or applicable stock exchange regulations if and when circumstances arise that will lead to changes compared to the date when these statements were provided.

In the European Union (including in France), this presentation is intended solely for “qualified investors” within the meaning of Article 2(1)(e) of the Prospectus Directive (Directive 2003/71/EC) as amended (including amendments by Directive 2010/73/EU), to the extent implemented in the relevant member state). This presentation has been prepared on the basis that any offering of securities by the Company in any member state of the European Economic Area has implemented the Prospectus Directive (2003/71/EC) will be made either by means of a prospectus filed with the authority of the relevant member state, or pursuant to an exemption under the Prospectus Directive, as implemented in that relevant member state, from the requirement to publish a prospectus.

This presentation does not constitute or form part of, and should not be construed as, an offer to sell or issue or the solicitation of an offer to buy or acquire securities of Abivax, in any jurisdiction or an inducement to enter into investment activity, nor shall there be any sale of securities in any state or jurisdiction in which such offer, solicitation or sale would be unlawful prior to registration or qualification under the securities law of any such state or jurisdiction. No part of this presentation, nor the fact of its distribution, should form the basis of, or be relied on in connection with any contract or commitment or investment decision whatsoever.

Abivax: A strong and diversified pipeline

ABX464: A promising candidate addressing attractive markets

Total market size
in inflammatory
diseases

greater than
USD 70 B

Market size
in first indication
(ulcerative colitis)

around
USD 5.7 B

Coming from the **proprietary** Abivax library of compounds, biased to **modulate RNA biogenesis** (>2200 molecules); Close collaboration with EVOTEC

Small molecule (quinoline), administered as an **oral capsule** (once a day)

First-in-Class, novel mechanism of action: Selective upregulation of anti-inflammatory microRNA miR-124

Good safety profile after administration to **>210 subjects**

Anti-inflammatory effect confirmed in DSS mouse model of IBD as well as in phase 2a induction and maintenance studies in ulcerative colitis. Phase 2b study in UC ongoing in 232 Patients, as well phase 2a in rheumatoid arthritis in 60 patients

High medical need for novel safe and efficacious drugs in inflammatory diseases

ABX464 showed efficacy in DSS mouse model*

ABX464 protects mice from death in the DSS mouse model

- ABX464. 20 days (n=8)
- No treatment (n=8)
- ABX464. 60 days (n=8)

DSS without ABX464 leads to intestinal damage

ABX464 protects intestinal structure

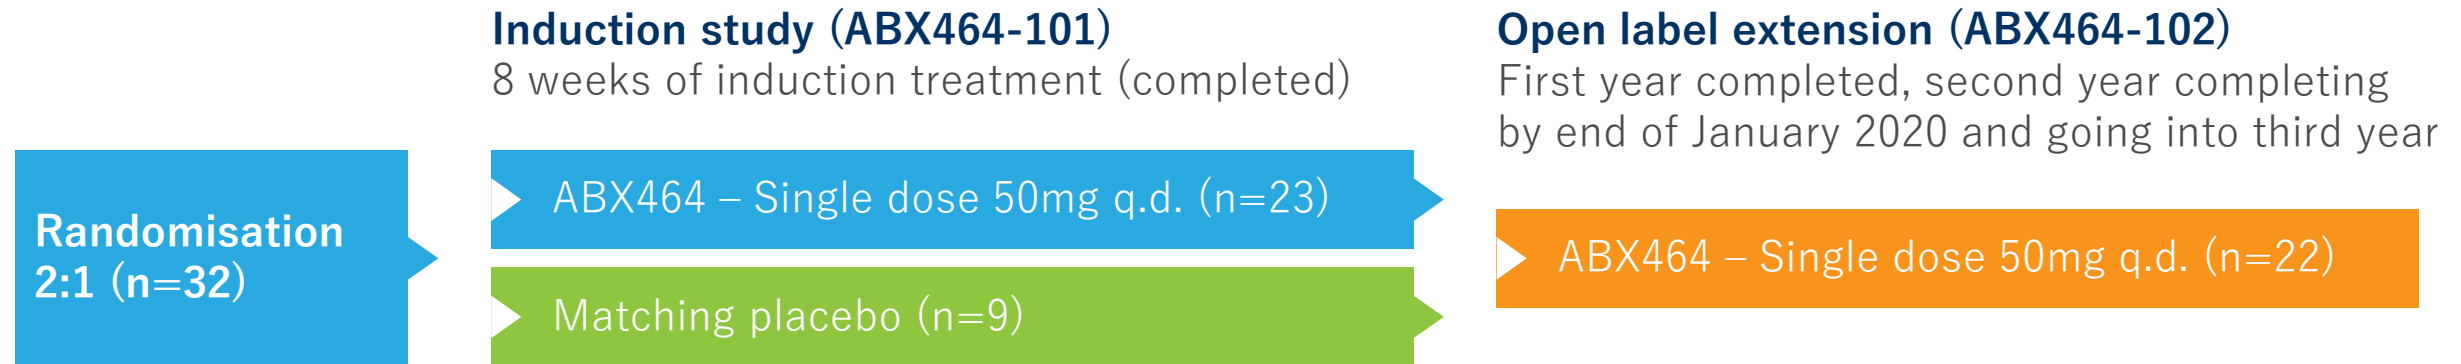

→ **ABX464 reduced the expression of pro-inflammatory cytokines in colon tissue:**
IL-6 (2x), TNF (7.5x) and MCP-1 (6x)

*Chebli et al, Nature Scientific Reports 7: 4860 (2017)

ABX464-101/102 study design: Phase 2a in ulcerative colitis

- Randomized, double-blind, placebo controlled, multi-national study followed by an open-label maintenance study

Induction study (ABX464-101)

8 weeks of induction treatment (completed)

Randomisation
2:1 (n=32)

ABX464 – Single dose 50mg q.d. (n=23)

Matching placebo (n=9)

Open label extension (ABX464-102)

First year completed, second year completing by end of January 2020 and going into third year

ABX464 – Single dose 50mg q.d. (n=22)

Study Population

- Moderate to severe active UC patients who **failed or were intolerant to immunomodulators, anti-TNF α , vedolizumab and/or corticosteroids**
- **Confirmed UC** for at least 3 months with a **Total Mayo Score of 6–12** with **endoscopic sub-score of 2 or 3**

Central reading of endoscopies (Induction)

Patient demographics and baseline disease characteristics

Groups generally well-balanced

		ABX-464 N = 23	Placebo N = 9	Total N = 32

Changes of Partial Mayo Score and fecal calprotectin during the maintenance phase for all patients and patients previously on biologics

Partial Mayo Score – Mean

Fecal calprotectin $\mu\text{g/g}$ – median

— All patients (N=19) — Patients previously treated with biologics (N=7)

→ **Partial Mayo Score continued to decrease**

→ **Fecal calprotectin levels went down to normal values (< 50 $\mu\text{g/g}$)**

ABX464-102: Efficacy data at 52 weeks open label extension

	ABX464 50 mg, PP	ABX464 50 mg, ITT
Clinical remission*	75% (N=16)	55% (12/22)
Endoscopic improvement*	100% (N=16)	72% (16/22)
Total Mayo Score reduction from maintenance baseline	- 57% (N=16)	- 52% (N=22)
Partial Mayo score reduction from maintenance baseline	- 45% (N=19)	- 41% (N=22)
Fecal calprotectin reduction from maintenance baseline	- 85% (N=19)	- 81% (N=22)
miR-124 expression in total blood (fold increase at M12)	215.0 (N=19)	-

***Clinical remission:**

TMS equal or lower than 2 and no sub-score >1

***Endoscopic improvement:**

Endoscopy sub-score 0 or 1

ABX464 showed a good safety profile during induction and 12 months open label maintenance phase

Safety profile consistent with previous and ongoing clinical studies

(>210 healthy volunteers and patients exposed to ABX464)

Overall: No deaths, no malignancies, no severe infections, no significant changes in the laboratory parameters including blood cell counts

No Serious Adverse Reactions, most AEs were of mild to moderate intensity

Most frequently reported AEs: Headache and epigastric pain; occurring mainly during the first days of treatment

Two patients prematurely withdrew due to an AE

Induction study:

Out of 20 patients dosed with ABX464, one patient prematurely withdrew due to AE (Transaminase elevation = 3xULN; no changes in other LFTs)

Maintenance study:

Out of 22 patients who rolled over into the maintenance, one patient withdrew due to AE (Grade 2 Headache at M4)

Conclusions

**ABX464 oral 50mg QD
drug candidate for moderate
to severe UC patients**

Good safety and tolerability of chronic treatment with ABX464 50mg QD in patients with UC

Conclusion is further supported by safety analysis in healthy volunteers and HIV infected patients (no serious adverse reactions, no severe infections, no lymphopenia, no neutropenia)

Confirmed preliminary efficacy in Phase 2a UC induction study

- All endpoints favorable to ABX464, with statistical significance in endoscopic improvement, TMS and PMS reductions, and clear trends for clinical remission and clinical response
- Fast onset of action
- Active in both biologics naive and biologics refractory patients

Efficacy signal further strengthened by 12-months maintenance study

- Continued very good safety profile
- Durability of clinical efficacy with further improvement and increased clinical remission with longer treatment
- Normalized fecal calprotectin levels
- Significant endoscopic improvement
- Continued over expression of miR-124

ABX464 ongoing and planned studies

Phase 2b in ulcerative colitis:

- Conducted with IQVIA as CRO
- 232 patients, 17 countries, 150+ study sites
- 4 study arms (placebo, 25, 50, 100 mg QD)
- Central blinded reading of endoscopies
- Top-line data for 2 months induction phase expected for end 2020

Phase 2b study in 232 patients with moderate to severe ulcerative colitis is currently ongoing in Canada and Europe, and with FDA clearance of IND (19/01/20) now preparing for patient recruitment in the US

Phase 2a study ongoing in rheumatoid arthritis and Phase 2b planned in Crohn's disease

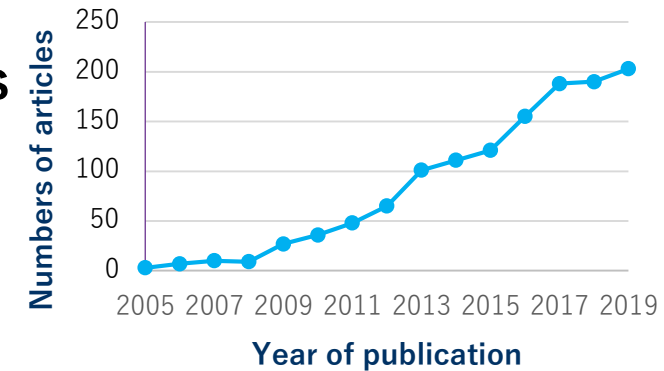

Preclinical models running in several inflammatory diseases, including Parkinson's, multiple sclerosis, NASH, psoriasis and PAH

ABX464 and ABX464-N-Glu: Mechanism of Action

miR-124 is a well-known modulator of inflammation

Between 2005 and 2019, more than **1100 scientific articles** have been published on miR-124 **including 133 papers** highlighting the importance of miR-124 in dampening the inflammatory process

Examples:

- miRNA-124 in immune system and immune disorders (review Qin Z, et al. Front Immunol 2016)
- miR-124/STAT3 system is a potential target for the therapeutic intervention of UC (Qin Z, et al. J Mol Med 2017)
- miR-124 regulates STAT3 expression and is down-regulated in colon tissues of pediatric patients with ulcerative colitis (Koukos G, et al. Gastroenterology 2013)
- miR-124 directly binds to the 3'UTR of MCP-1 to dampen inflammation (Li Y, et al. J Cell Mol Med 2019)
- miR-124 Mediates the cholinergic anti-Inflammatory action through inhibiting the production of pro-inflammatory cytokines (Sun Y, et al. Cell Res 2013)
- miR-124 confers brain inflammatory protection (Ponomarev ED, et al. Nat Med 2011)

miR-124 is an endogenous microRNA that regulates gene expression by preventing translation of target mRNAs (cyto- and chemokines)

miR-124 can modulate multiple pathways involved in inflammation

miR-124 can reduce the translation of targets' mRNAs and thereby protein expression:

- STAT3 (A key regulator of JAK signaling, decreases IL6 and TNF α)
- IL6R (reducing IL6 action)
- MCP1 (Macrophage chemoattractant protein 1)
- PTBP1 (a splicing factor involved in remodeling the lung tissue of PAH patients)
- Elk-3 (modulates the phagocytosis of bacteria by macrophages)
- CDK2 (controls peripheral immune tolerance)
- 13 other targets that are involved in inflammation

ABX464 is the only small molecule in clinical development that can specifically induce miR-124 expression

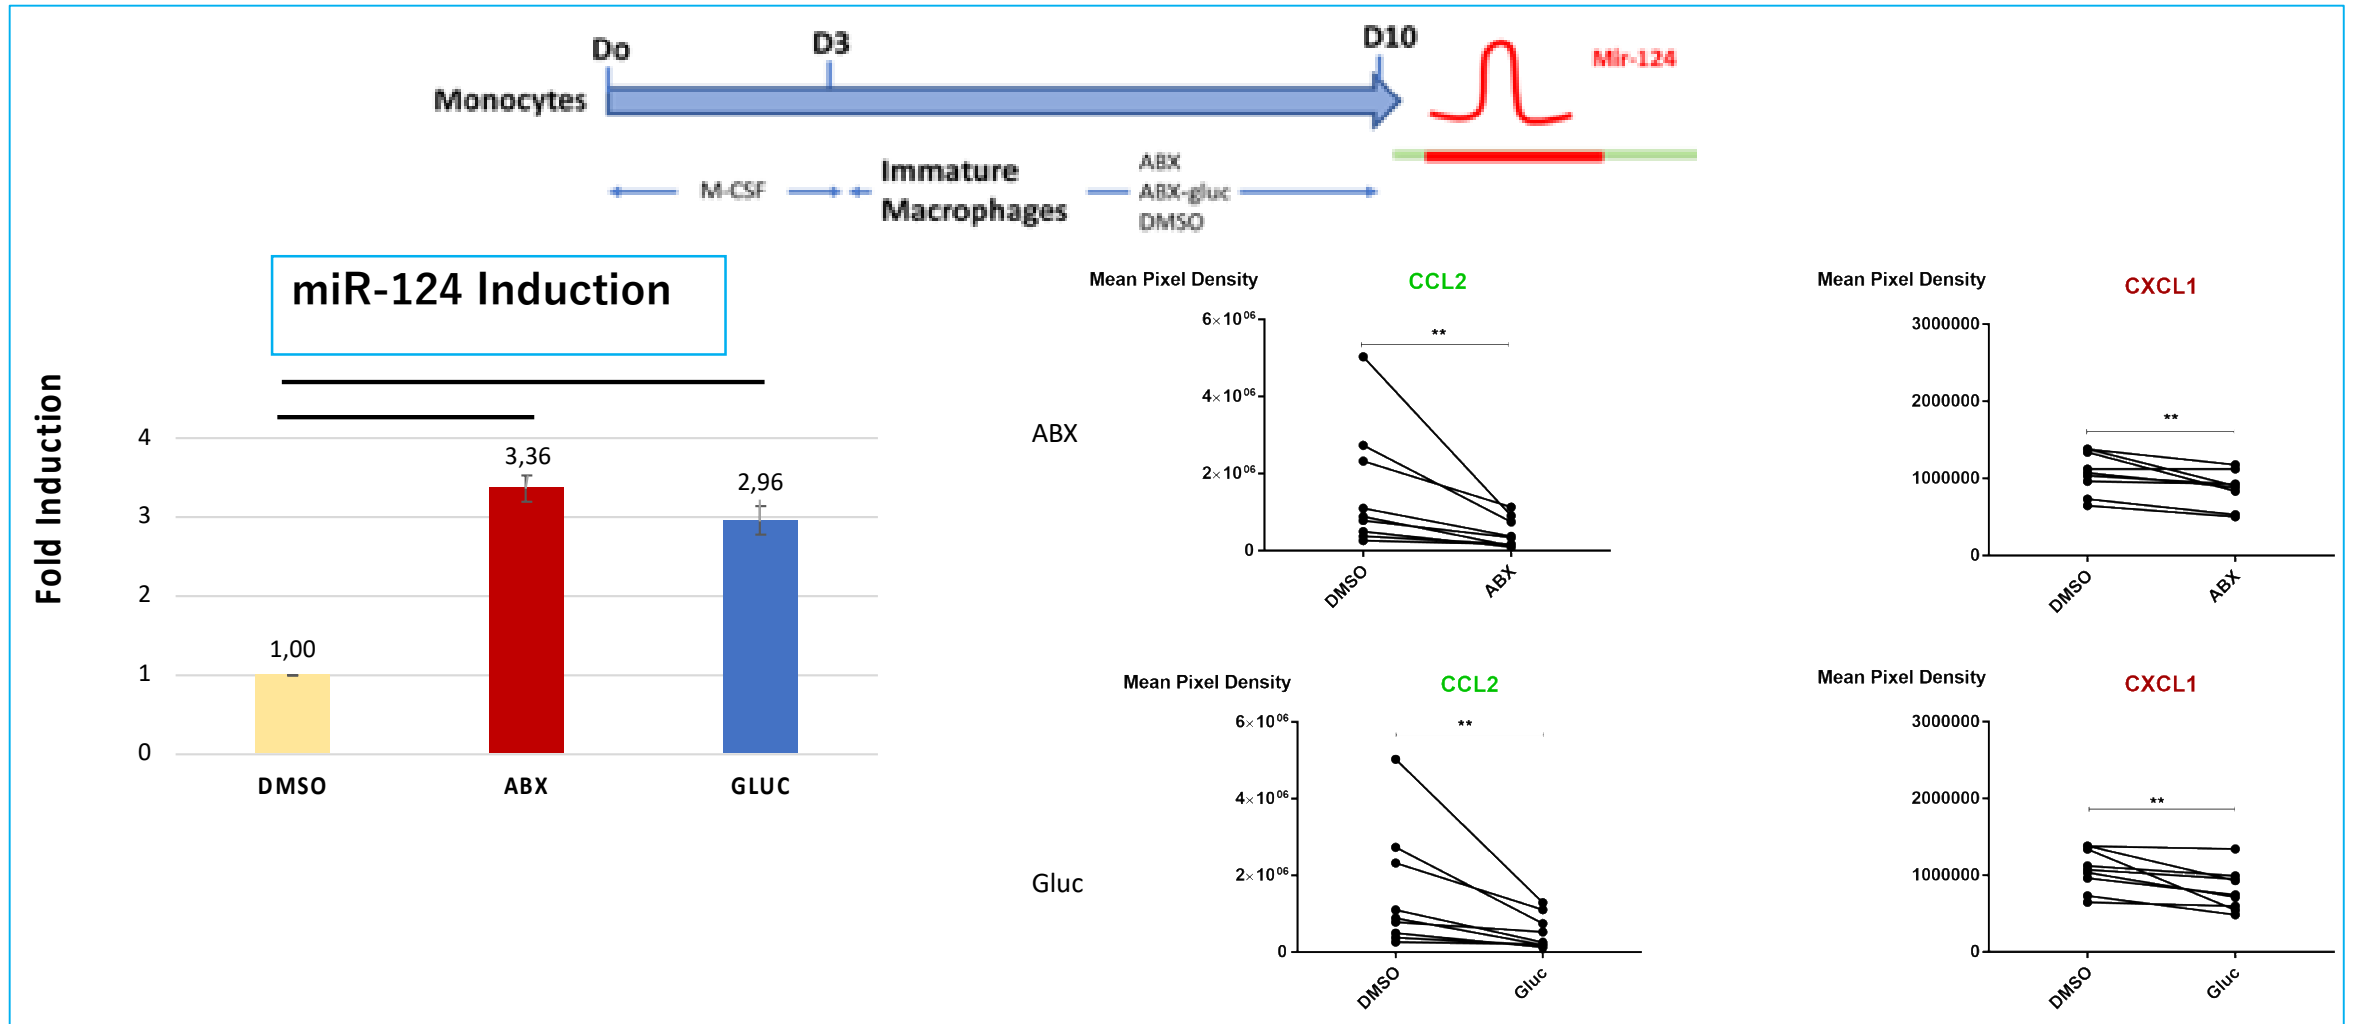

ABX464 main metabolite, ABX464-N-Glu also induces miR-124 expression

Out of 1105 microRNAs, miR-124 was the only microRNA upregulated

Both ABX464 and ABX464 N-Glu induce upregulation of miR-124 in purified human monocyte-derived macrophages and decrease MCP1/CCL2 expression

In ABX464 treated DSS mice, ABX464 reduces pro-inflammatory cytokines and chemokines in the colon

ABX464 induces miR-124 and reduces pro-inflammatory cytokines in PBMC and in colon tissue ABX464 treated DSS mice

Chebli & al. Scientific Reports 2017 Jul 7;7(1)

ABX464 induces miR-124 expression by specifically inducing the splicing of a single Long-Non-Coding RNA (lncRNA00599-205)

miR-124 is transcribed from 3 genomic loci, but ABX464 induces miR-124 expression only from Locus 1

Locus miR-124-1 contains the Long Non-Coding RNA, lncRNA00599-205, whose splicing is required for miR-124 expression

ABX464 induces the splicing of a lncRNA00599-205 to generate miR-124

Mutations in the splice sites of lncRNA00599-205 prevent miR-124 expression

RNAseq data showed that ABX464 does not impact the splicing of cellular mRNA besides lncRNA00599-205

ABX464 and ABX464-N-Glu bind to the Cap Binding Complex (CBC), which is key factor for RNA processing

CBC binds to the 5' end of all RNAs generated in the nucleus and ensures their processing

Binding of ABX464 and ABX464 N-Glu to CBC was demonstrated by:

- UV crosslinking with chemically modified ABX464
- Thermoshift assay with purified complex CBC80:CBC20
- Cryo-EM and chemoinformatics

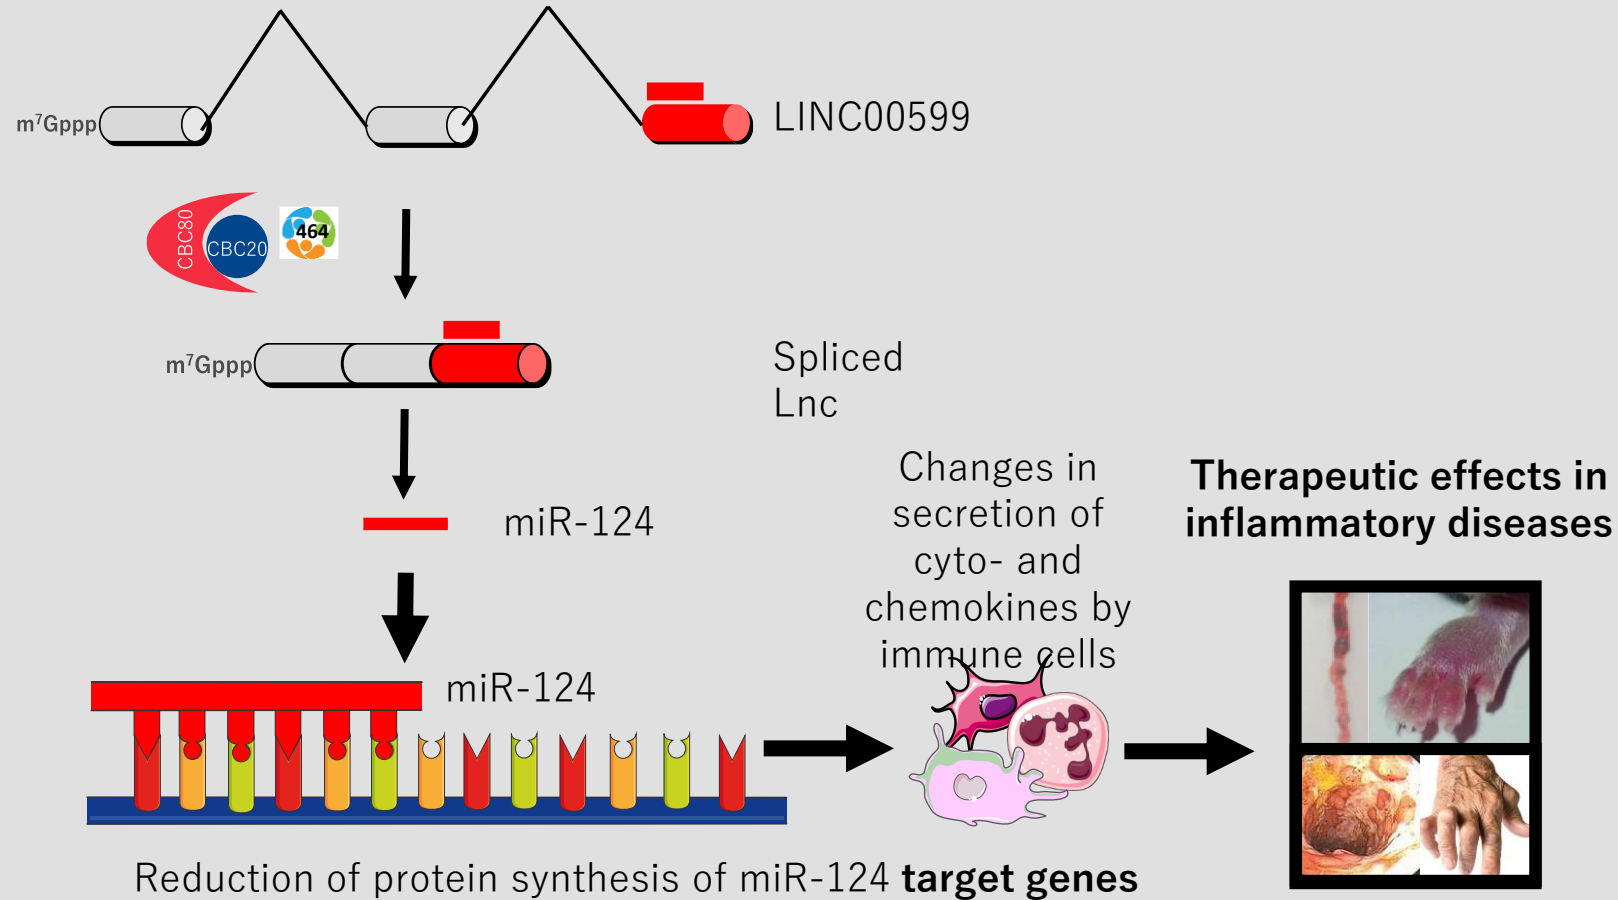

ABX464 and ABX464-N-Glu bind to the same site on CBC

ABX464-CBC at 5.8A resolution

ABX464 N-Glu-CBC at 4.6A resolution

Inducing specifically the biogenesis of miR-124 by the drug candidate ABX464 in immune cells opens a novel way to treat Inflammatory Diseases

Summary

ABX464 mechanism of action

miR-124 anti-inflammatory properties have been extensively described in the literature

Abivax's oral drug candidate ABX464 is the only small molecule in clinical development that specifically induces the overexpression of a miR-124

miR-124 expression by ABX464 is triggered by splicing of a single long non-coding RNA, LNC00599-205 after binding to CBC, without impacting expression of cellular RNAs

Effects of ABX464 in DSS mice and immune cells are consistent with the known miR-124 anti-inflammatory effects including reduction of pro-inflammatory cytokine expression and reduced recruitment of inflammatory cells leading to an anti-inflammatory effect
